Assignments			
 Assignment 1 upload	B	F–A	<ul style="list-style-type: none">* Background posses a risk of memory issues as it does not own or manage a data buffer it points to.* Files with unrequested names have been included.<ul style="list-style-type: none">- Programming_assignment_checklist.pdf* Files missing in the archive.<ul style="list-style-type: none">- checklist.pdf* Long lines: 11 (81+: 1, 91+: 3, 101+: 5, 121+: 2)
 Assignment 2 upload	A	F–A	<ul style="list-style-type: none">* ShapeFactory.h should not include any headers of particular shapes (perhaps except IShape itself); inclusion of specific shape headers is an implementation detail, and should belong to *.hpp file.* ShapeFactory.h should not include unnecessary headers, not used by the interface of the class.
 Assignment 3 upload	A	F–A	<ul style="list-style-type: none">* Consider a better naming convention for to_string() parameters, all other parameters are lowercase.* You can initialize your array with zeros in a declaration of a data member: unsigned char Bits[N]{}; this makes the constructor unnecessary.* operator[] works almost the same as test(), but it offers better performance at the cost of no exception checking.* to_string() and count() never go out of bounds and using operator[] would be more efficient than test().* Calling reset() in set() may lead to unnecessary checking of exceptions twice.
 Assignment 4 upload	A	F–A	<ul style="list-style-type: none">* Constructor of bitset_tep should be private, because it is the create() function that instantiates our TEP.* Perfect forwarding does not work - the forwarding function accepts parameters by value, not by universal reference, thus losing the information about their lvalue/rvalue nature.
 Assignment 5 upload	A	F–A	Good job!
 Assignment 6 upload	A	F–A	Good job!
 Assignment 7 upload	A	F–A	Good job!
